- How to Arrange and Size the Favorite Grid

# How to Add an Inventory Product to Favorites

1. Open **Settings → Favorite**.
2. In the add area, leave the selector on **Product favorite**.
3. Search for and select the inventory product.
4. Review the price brought in for the product.
5. Choose a tile color.
6. Select **Add Product**.

The favorite remains connected to the selected product and adds that product through the normal register flow. Confirm the correct product and price before adding the shortcut.

# How to Add a Miscellaneous Favorite

A miscellaneous favorite lets you create a shortcut that is not limited to an existing inventory product. It is useful for labor, services, or another predefined quick charge.

1. Open **Settings → Favorite**.
2. Switch from **Product favorite** to **Custom misc favorite**.
3. Enter a clear **Favorite Name**.
4. Enter a selling price greater than zero.
5. Choose a tile color.
6. Select **Add Misc Favorite**.

When selected at the register, the shortcut adds a miscellaneous item to the cart using the configured name and price.

# How to Choose Colors for Favorite Tiles

Each favorite tile can have its own color. Use color to make the grid faster to scan—not merely decorative.

## Simple color plan

- Use one color for products.
- Use another for services or labor.
- Group related accessories with a shared color.
- Reserve attention-grabbing colors for special-purpose items.

The tile automatically uses readable contrasting text. Keep the system consistent so employees can recognize categories without reading every tile.

# How to Arrange and Size the Favorite Grid

Arrange Favorites so the most important choices are easiest to reach.

1. Open **Settings → Favorite**.
2. Drag tiles into the order and position you prefer.
3. Resize tiles when a product needs more or less visual emphasis.
4. Place related items together.
5. Review the layout at the register.

Put best sellers near the beginning of the grid. Use position, size, and color together to create a layout employees can learn quickly.
