

How to show the product search bar and choose its search style

Configure how employees find products from the main register on supported desktop layouts.

Show or hide product search

1. Open **Settings > Register**.
2. Find **Search Bar**.
3. Select **Show** to make product search available, or **Hide** to remove it from the register.
4. Save the settings.

Choose the search presentation

1. When the search bar is shown, find **Product Search**.
2. Choose the standard dropdown or the larger searchable dialog that opens after Enter is pressed.
3. Save the settings.

Both supported presentations follow the same product-discovery rules. Employees can search by product name and supported identifiers, including exact UPC, SKU, IMEI, or serial number when applicable and available at the current location.

For serialized lookup instructions, see [How to find a device by IMEI or serial number](#).
