Register Settings overview

Register Settings control how employees search for products, build a sale, select customers, manage receipts and invoices, and use shortcuts at checkout.

Settings covered in this book

- **Checkout controls:** Discounts, quantity, price confirmation, product-cost updates, and cart position.
- **Aging alerts:** Thresholds for serialized inventory, repairs, and layaways.
- **Customer requirements:** Walk-in customer behavior, required customer selection, last names, and referral sources.
- **Receipts and invoices:** Policies, receipt timer, open invoices, payment receipts, and employee line-item selection.
- **Product entry and search:** Search display, search style, multiline descriptions, and capitalization.
- **Quick tools:** Quick Notes, keypad options, EBT, and Quick Sale.

Before changing Register Settings

Review the workflow with the employees who use the register. Some controls depend on the enabled modules, brand, device layout, or employee permissions, so not every option appears for every location.

Changes apply to the location being managed. Save the page after making changes, then verify the intended behavior at the register.

Start with checkout controls, or learn why inventory aging matters.
