How to log out employees after every completed transaction

Enable automatic logout after a completed transaction when each sale should end the current employee’s session.

Enable transaction logout

1. Open **Settings > Security**.
2. Find **Session Security**.
3. Enable **Log out after every completed transaction**.
4. Save Security settings.

What happens

After a supported sale, repair, or layaway checkout is completed, RepairNest POS returns to the logout screen. The next employee must sign in before beginning another transaction.

When to use it

- Several employees share one register.
- Sales must always be tied to the employee who completed them.
- The register is accessible from a public or high-traffic area.

This setting protects completed-transaction handoffs. Use idle logout as well when an employee may walk away before completing a transaction.
